#### **INTRODUCTION**

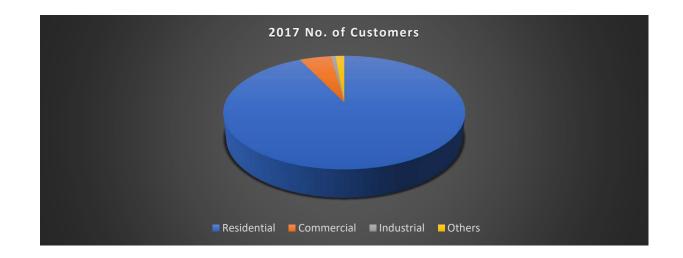

The Peninsula Electric Cooperative, Inc. or PENELCO, is one of the top performing Electric Distribution Utilities in the Philippines. It is officially incorporated and registered on 10 April 1990 with the National Electrification Administration (NEA) under Presidential Decree 269. The cooperative holds the power distribution franchise for the province of Bataan with eleven (11) municipalities, one (1) city as well as the four(4) barangays outside the province of Bataan, namely, Brgy. Batiawan in Zambales and Brgys. Sto. Rosario, Bodega and Dampe in Pampanga. PENELCO's 50-year franchise for these markets, awarded in 2002, gives the electric cooperative control of the energy distribution services for an area of approximately 1,373 square kilometers and a population of more or less 760,650 as per 2015 census.

The total household connection as of December 2017 is 190,403 member-consumers. Employee to Consumer Ratio of PENELCO is 1:608.

With the adept utilization of its resources, PENELCO is financially stable with a total Asset of PhP3.1 billion for the year ending 2017 and it is the only electric cooperative that has positive accumulated net margin since inception.

Historical data indicates that the peak demand of the system happens during night time, ranging between 9:00PM to 11:00PM. The off-peak demand, however, occurs during 8:00AM to 10:00AM. The load continuously grows, sometimes going beyond the forecasted values, due to the connection of new establishments and expansion of industrial plants like Bataan2020 and Hermosa Ecozone. The forecasting method used for peak demand is the Quadratic Logarithmic Trending (b is zero), while the method used for Off-Peak is the Quadraric Logarithmic Trending (b and c are zero). The forecasted data passes the standard validity and accuracy tests.

Note: The demand used for DDP was based on 2017 data, while in PSPP, the demand used was based on 2018 actual data.

#### 2017 PENELCO LOAD PROFILE

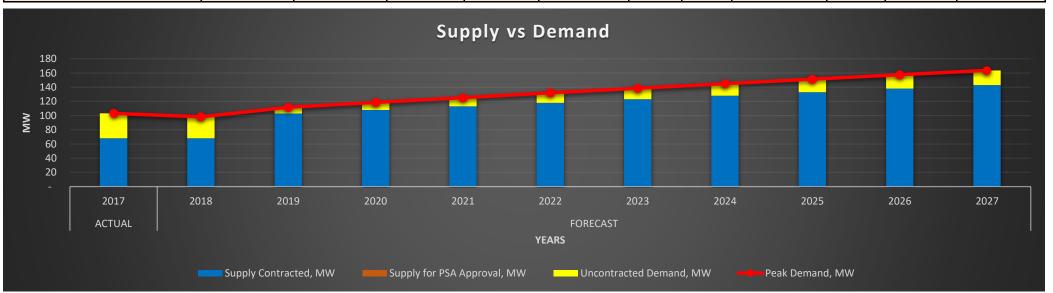

PENELCO has an existing contract with San Miguel Energy Corporation (SMEC) for base load of 10MW and also with GN Power Mariveles Coal Plant (GMCP) which is considered as intermediate load. Moreover, PENELCO is a direct participant of Wholesale Electricity Spot Market (WESM).

Energy requirement for the year 2017 was acquired from three (3) power suppliers namely GN Power Mariveles Coal Plant (GMCP), San Miguel Energy Corporation (SMEC) and Wholesale Electricity Spot Market (WESM) which supplied 62%, 13% and 25% of the total energy, respectively. All of the suppliers mentioned are in compliance with the Power Supply Agreement between the Cooperative and the supplier. PENELCO used the 2018 actual data as the base year and the Cubic & Logarithmic Trending (b & c are zero) model in forecasting.

NOTE: On the time when DDP was being completed, Supply Contracted used for SMEC Sual was 20 MW, unfortunately, we are still awaiting for the Final Approval of the Energy Regulatory Commission (ERC) for the implementation of the 20MW capacity. Thus, for the PSPP, 10MW was still the actual capacity being delivered by SMEC. For the exact delivery date for SMC Consolidated Power, we will depend on the final approval by ERC. And for GNPower Dinginin (GNPD), the plant is still on its construction stage and is expected to be completed by the end of this year, 2019.

#### DISTRIBUTION IMPACT STUDY

The substation projects are in line with the forecasted and actual demand of the existing substation in each respective towns. This is to cater the further load growth of the province. Alongside are the subtransmission line projects that aim for continuous rehabilitation and construction to accommodate the incoming load of new substations, and to further improve the reliability of the system. The design of substations, subtransmission and distribution lines are in compliance with the Philippine Grid Code, Philippine Distribution Code and Philippine Electrical Code, following the required design, clearances, relay coordination and others.
